1. Functional Description

1.1 Overview

The Ascenkorea AKBUE module utilizes the MediaTek new generation GPS Chipset MT3339 that achieves the industry's highest level of sensitivity (-165dBm) and instant Time-to-First Fix(TTFF) with lowest power consumption for precise GPS signal processing to give the ultra-precise positioning under low receptive, high velocity conditions.

With built-in LNA to reach total NF to 0.7dB customers can relax antenna requirement and don't need for external LNA. Power management design makes AKBUE easily integrated into your system without extra voltage regulator. AKBUE allows direct battery connection, no need any external LDO and gives customers plenty of choices for their application circuit.

Up to 12 multi-tone active interference canceller (ISSCC2011 award), customer can have More flexibility in system design. Supports up to 210 PRN channels with 66 search channels and 22 simultaneous tracking channels, AKBUE supports various location and navigation applications, including autonomous GPS, SBAS ranging (WAAS, EGNO, GAGAN, and MSAS), DGPS (RTCM), and AGPS.

AKBUE is excellent low power consumption characteristic (acquisition 63mW, tracking 49mW), power sensitive devices, especially portable applications, need not worry about operating time anymore and user can get more fun. Combined with many advanced features including AlwaysLocate™, EASY™, EPO™, and logger function.

Application

- Handheld Device
- Tablet PC/PLB/MID
- M2M application
- Asset management
- Surveillance

1.2 Highlights and Features

- ◆ Ultra-high sensitivity, -165dBm¹
- ◆ L1 Frequency, C/A code, 66-channels satellite searching
- ◆ AGPS support for fast positioning (offline mode: EPO valid up to 14 days)
- ◆ DGPS(WAAS/EGNOS/MSAS/GAGAN) support
- ◆ Multi-path detection and compensation
- ◆ USB Interface support
- ◆ High update rate, up to 10Hz (configurable by firmware)
- ◆ Magnetic Variation function support (configurable by AscenKorea customized firmware)
- ◆ Low power consumption, 48mA acquisition, 37mA tracking
- ◆ Low shut-down current consumption, 20uA typical
- ◆ RoHS compliant

¹ Reference to GPS chipset specification

1.4 Multi-tone active interference canceller

Because different application (Wi-Fi , GSM/GPRS,3G/4G,Bluetooth)are integrated into navigation system , the harmonic of RF signal will influence the GPS reception , The multi-tone active-interference canceller (abbr: MTAIC) can reject external RF interference which come from other active components on the main board , to improve the capacity of GPS reception without any needed HW change in the design .AKBU2 can cancel up to 12 independent channel interference continuous wave (CW)

1.5 1PPS

A pulse per second (1 PPS) is an electrical signal that very precisely indicates the start of a second. Depending on the source, properly operating PPS signals have an accuracy ranging 10ns.

1 PPS signals are used for precise timekeeping and time measurement. One increasingly Common use is in computer timekeeping, including the NTP protocol. A common use for the PPS signal is to connect it to a PC using a low-latency, low-jitter wire connection and allow a program to synchronize to it:

PA6C supply the high accurate 1PPS timing to synchronize to GPS time after 3D-Fix. A power-on output 1pps is also available for customization firmware settings.

1.6 Timer Function for device on/off control(Optional)

The timer function support a time tick generation of 31.25ms resolution, the period of timer can be from 31.25ms to 524287s, the pin outputs signal during the timer period and becomes a input pin after time out, the system can use the pin to connect an external LDO controller and pull high circuit to enable other device for specified operation (ex: wake up GSM/GPRS processor to transmit location data of asset during one period, then enter power saving mode after finish its job)

1.7 32KHz clock output(Optional)

The 32K Out can output 32.768KHz clock which can be used to support some peripherals that need an real time clock source, don't need an external crystal and cost saving. The pin also could be programmed to be input pin which can receive the signal from an external accelerator sensor or vibration sensor to be the wake -up signal of AKBU2 when the module is in low power mode.

This document is the exclusive property of AscenKorea Inc. and should not be distributed, reproduced, into any other format without prior permission of AscenKorea Inc. Specifications subject to change without prior notice.

1.8 SYNC(Optional)

Sync is a time stamp signal input pin for introducing an external timing to the GPS receiver. And obtaining the relationship between the external timing and the receiver local timing. Which the precise external timing input and the established relationship, the GPS time of week (TOW) can be correctly estimated in the GPS receiver. This technology is beneficial for time to first fix (TTFF), especially in weak signal environments, in hot start case, with priori information about GPS receiver's location and satellite ephemeris data, the GPS receiver uses the correct GPS TOW to accurately predict the signal code chip/phase. Therefore, the code search range can be narrowed down accordingly. Hence fast TTFF is achieved by the SYNC technology.

1.9 AGPS Support for Fast TTFF (EPO™)

The AGPS (EPO™) supply the predicated Extended Prediction Orbit data to speed TTFF, users can download the EPO data to GPS engine from the FTP server by internet or wireless network, the GPS engine will use the EPO data to assist position calculation when the navigation information of satellites are not enough or weak signal zone. About the detail, please link [Ascenkorea website](#).

1.10 EASY™

The EASY™ is embedded assist system for quick positioning, the GPS engine will calculate and predict automatically the single ephemeris (Max. up to 3 days) when power on, and save the predict information into the memory, GPS engine will use these information for positioning if not enough information from satellites, so the function will be helpful for positioning and TTFF improvement under indoor or urban condition, the Backup power (VBACKUP) is necessary.

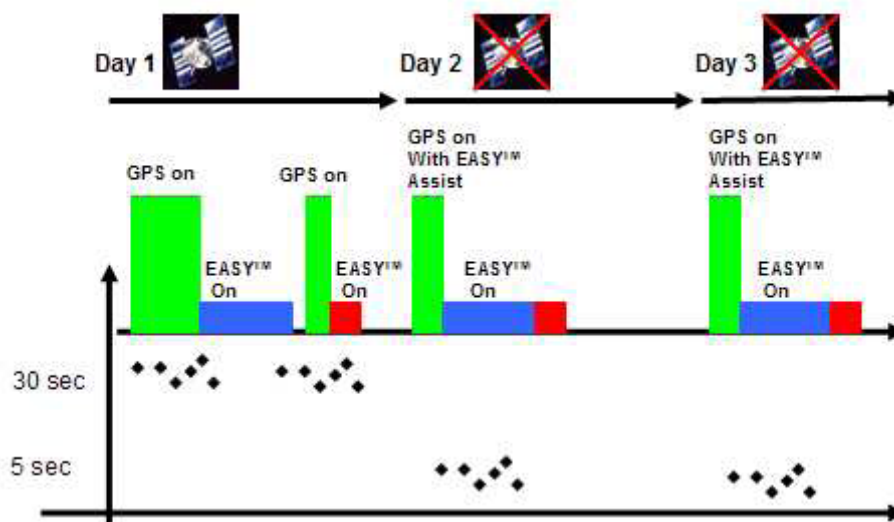

Figure 1.12-1 EASY System operation

Please refer to the Fig 1.12-1, When GPS device great the satellite information from GPS satellites, the GPS engine automatically pre-calculate the predict orbit information for 3 days

The GPS device still can quickly do the positioning with EASY™ function under weak GPS signal.

1.11 AlwaysLocate™ (Advance Power Periodic Mode)

Embedded need to be executed full y all the time , the algorithm can be set by different necessary to decide the operation level of GPS function , reduce power consumption , it will suffer positing accuracy to get the target of power saving and extend the usage time of product . (The positioning accuracy of reporting location < 50m (CEP)

1.12 Embedded Logger function

The Embedded Logger function don't need host CPU (MCU) and external flash to handle the operation , GPS Engine will use internal flash (embedded in GPS chipset) to log the GPS data (Data format : UTC, Latitude , longitude, Valid ,Checksum), the max log days can up to 2 days under AlwaysLocate™ condition .^{Note}

Note: Data size per log was shrunk from 24 bytes to 15 bytes.

2.2 Description of I/O Pin

1PPS, Pin1

This pin provides one pulse-per-second output from the module, which is synchronized to GPS time. Keep floating if not used.

VCC, Pin2

The main DC power supply for the module. The voltage should be kept between 5.0V.

The ripple must be controlled under 50mV_{pp}

TXDA, Pin3 (Default)

This is the UART transmitter of the module. It outputs the GPS information for application

RXDA, Pin4 (Default)

This is the UART receiver of the module. It is used to receive commands from system

GND, Pin5

Ground

This document is the exclusive property of AscenKorea Inc. and should not be distributed, reproduced, into any other format without prior permission of AscenKorea Inc. Specifications subject to change without prior notice.

copyright © AscenKorea Inc. All right reserved

RTCM, Pin6 (Optional)

This pin receive DGPS data of RTCM protocol (TTL level) ,if not used keep floating

3D-FIX, Pin6 (Optional)

The 3D-FIX was assigned as fix flag output. If not used, keep floating

- Before 2D Fix
The pin should continuously output one-second high-level with one-second low-level signal

- After 2D or 3D Fix
The pin should continuously output low-level signal
Low _____

2.3 Specification List

Parameter	Description
GPS Solution	MTK MT3339
Frequency	L1, 1575.42MHz
Sensitivity ¹	Acquisition -148dBm, cold start Reacquisition -160dBm Tracking -165dBm
Channel	66 channels
TTFF ¹	Hot start: 1 second typical Warm start: 33 seconds typical Cold start: 35 seconds typical (No. of SVs>4, C/N>40dB, PDop<1.5)
Position Accuracy	Without aid:3.0m (50% CEP) DGPS(RTCM,SBAS(WAAS,EGNOS,MSAS)):2.5m (50% CEP)
Velocity Accuracy	Without aid : 0.1m/s DGPS(RTM,SBAS(WAAS,EGNOS,MSAS)):0.05m/s Without aid:0.1 m/s ²
Acceleration Accuracy	Without aid:0.1 m/s ² DGPS(RTM,SBAS(WAAS,EGNOS,MSAS)):0.05m/s ²
Timing Accuracy (1PPS output)	10 ns RMS
Altitude	Maximum 18,000m (60,000 feet)
Velocity	Maximum 515m/s (1000 knots)
Acceleration	Maximum 4G
Update Rate	1Hz (default), maximum 10Hz
Baud Rate	9600 bps (default)
DGPS	RTCM protocol(configurable by firmware) or SBAS(default) [QZSS,WAAS, EGNOS, MSAS,GAGAN]
AGPS	Support
Power Supply	VCC : 5V
Current Consumption	19mA acquisition, 15mA tracking
Working Temperature	-40 °C to +85 °C(without Battery) -20 °C to +60 °C(with Battery)
Dimension	25 X 35 X 9.7(SMA) [mm]
Weight	7 g

3. Protocols

NMEA Output Sentence

Table-1 lists each of the NMEA output sentences specifically developed and defined by MTK for use within MTK products

Table-1: NMEA Output Sentence	
Option	Description
GGA	Time, position and fix type data.
GSA	GPS receiver operating mode, active satellites used in the position solution and DOP values.
GSV	The number of GPS satellites in view satellite ID numbers, elevation, azimuth, and SNR values.
RMC	Time, date, position, course and speed data. Recommended Minimum Navigation Information.
VTG	Course and speed information relative to the ground.

GGA—Global Positioning System Fixed Data. Time, Position and fix related data

Table-2 contains the values for the following example :

\$GPGGA,064951.000,2307.1256,N,12016.4438,E,1,8,0.95,39.9,M,17.8,M,,*65

Table-2: GGA Data Format

Name	Example	Units	Description
Message ID	\$GPGGA		GGA protocol header
UTC Time	064951.000		hhmmss.sss
Latitude	2307.1256		ddmm.mmmm
N/S Indicator	N		N=north or S=south
Longitude	12016.4438		dddmm.mmmm
E/W Indicator	E		E=east or W=west
Position Indicator	1		See Table-3
Satellites Used	8		Range 0 to 14
HDOP	0.95		Horizontal Dilution of Precision
MSL Altitude	39.9	meters	Antenna Altitude above/below mean-sae-level
Units	M	meters	Units of antenna altitude
Geoidal Separation	17.8	meters	
Units	M	meters	Units of geoid separation
Age of Diff. Corr.		second	Null fields when DGPS is not used
Checksum	*65		
<CR> <LF>			End of message termination

Table-3: Position Fix Indicator

Value	Description
0	Fix not available
1	GPS fix
2	Differential GPS fix

GSA—GNSS DOP and Active Satellites

Table-4 contains the values for the following example :

\$GPGSA,A,3,29,21,26,15,18,09,06,10,,,,,2.32,0.95,2.11*00

Table-4: GSA Data Format			
Name	Example	Units	Description
Message ID	\$GPGSA		GSA protocol header
Mode 1	A		See Table-5
Mode 2	3		See Table-6
Satellite Used	29		SV on Channel 1
Satellite Used	21		SV on Channel 2
....
Satellite Used			SV on Channel 12
PDOP	2.32		Position Dilution of Precision
HDOP	0.95		Horizontal Dilution of Precision
VDOP	2.11		Vertical Dilution of Precision
Checksum	*00		
<CR> <LF>			End of message termination

Table-5: Mode 1	
Value	Description
M	Manual—forced to operate in 2D or 3D mode
A	2D Automatic—allowed to automatically switch 2D/3D

Table-6: Mode 2	
Value	Description
1	Fix not available
2	2D (< 4 SVs used)
3	3D (≥ 4 SVs used)

RMC—Recommended Minimum Navigation Information

Table-8 contains the values for the following example :

```
$GPRMC,064951.000,A,2307.1256,N,12016.4438,E,0.03,165.48,260406,,,A*55
```

Table-8: RMC Data Format			
Name	Example	Units	Description
Message ID	\$GPRMC		RMC protocol header
UTC Time	064951.000		hhmmss.sss
Status	A		A=data valid or V=data not valid
Latitude	2307.1256		ddmm.mmmm
N/S Indicator	N		N=north or S=south
Longitude	12016.4438		dddmm.mmmm
E/W Indicator	E		E=east or W=west
Speed over Ground	0.03	knots	
Course over Ground	165.48	degrees	True
Date	260406		ddmmyy
Magnetic Variation		degrees	E=east or W=west (Need Ascenkorea Customization Service)
Mode	A		A= Autonomous mode D= Differential mode E= Estimated mode
Checksum	*65		
<CR> <LF>			End of message termination

VTG—Course and speed information relative to the ground

Table-9 contains the values for the following example:

\$GPVTG,165.48,T,,M,0.03,N,0.06,K,A*37

Table-9: VTG Data Format			
Name	Example	Units	Description
Message ID	\$GPVTG		VTG protocol header
Course	165.48	degrees	Measured heading
Reference	T		True
Course		degrees	Measured heading
Reference	M		Magnetic (Need Ascenkorea Customization Service)
Speed	0.03	knots	Measured horizontal speed
Units	N		Knots
Speed	0.06	km/hr	Measured horizontal speed
Units	K		Kilometers per hour
Mode	A		A= Autonomous mode D= Differential mode E= Estimated mode
Checksum	*06		
<CR> <LF>			End of message termination

MTK NMEA Command Protocol

Packet Type:

103 PMTK_CMD_COLD_START

Packet Meaning:

Cold Start : Don't use Time, Position, Almanacs and Ephemeris data at re-start.

Example:

\$PMTK103*30<CR><LF>

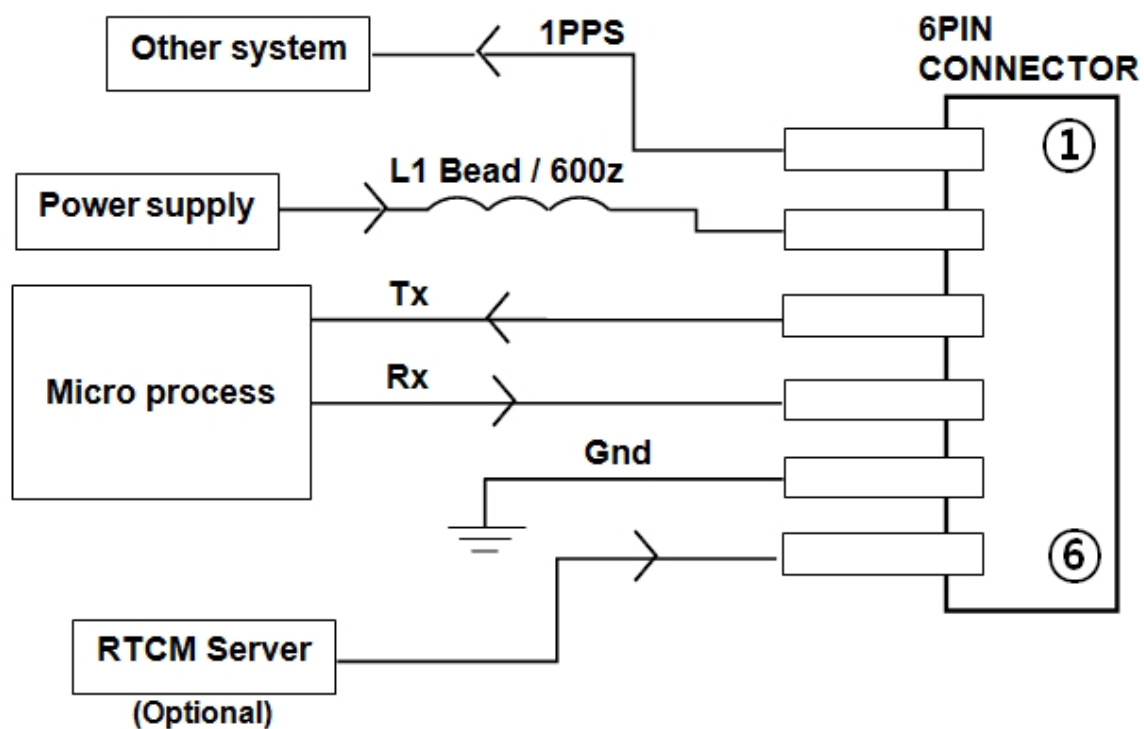

4. Application

4.1 Description

This chapter introduces the reference schematic design for the best performance.

4.2 Reference Design Circuit

External Antenna Application

Notice:

Ferrite bead L1 was add for power noise reduction.

5. Packing and Handling

GPS modules, like any other SMD devices, are sensitive to moisture, electrostatic discharge, and temperature. By following the standards outlined in this document for Ascenkorea GPS module storage and handling, it is possible to reduce the chances of them being damaged during production set-up. This document will go through the basics on how Ascenkorea packages its modules to ensure they arrive at their destination without any damages and deterioration to performance quality, as well as some cautionary notes before going through the surface mount process.

Please read the sections II to V carefully to avoid damages permanent damages due to moisture intake

GPS receiver modules contain highly sensitive electronic circuits and are electronic sensitive devices and improper handling without ESD protections may lead to permanent damages to the modules. Please read section VI for more details.

5.1 ESD Handling

Please carefully follow the following precautions to prevent severe damage to GPS modules.

Ascenkorea GPS modules are sensitive to electrostatic discharges, and thus are Electrostatic Sensitive Devices (ESD). Careful handling of the GPS modules and in particular to its patch antenna (if included) and RF_IN pin, must follow the standard ESD safety practices:

- ✓ Unless there is a galvanic coupling between the local GND and the PCB GND, then the first point of contact when handling the PCB shall always be between the local GND and PCB GND.
- ✓ Before working with RF_IN pin, please make sure the GND is connected

copyright © AscenKorea Inc. All right reserved

- ✓ When working with RF_IN pin, do not contact any charges capacitors or materials that can easily develop or store charges such as patch antenna, coax cable, soldering iron.
- ✓ Please do not touch the mounted patch antenna to prevent electrostatic discharge from the RF input
- ✓ When soldering RF_IN pin, please make sure to use an ESD safe soldering iron (tip).
